

Consequentiality: route-scale framing is attached to coordinate-incomplete results

Route-scale framing asserted (verbatim, page-locked)			Decision-controlling coordinates reported	
			deployed source capacity	wall-plug efficiency
Kato 2024	<i>"towards lunar base construction"</i>	★ JP STARDUST	absent	absent
Lim 2023	<i>"industrial-scale lunar construction"</i>	★ ESA Terrae Novae 2030+	absent	absent
Linke 2022	<i>"... very scalable" technology</i>	★ MOONRISE mission	absent	absent
Gines 2023	<i>"proved the viability ... for paving applications"</i>		absent	absent
Lim 2021	<i>directed at "... spacecraft landing pads"</i>		absent	absent
Zhu 2026	<i>"in situ construction of lunar infrastructure"</i>		absent	absent
Tsubaki 2024	<i>"Self-Sufficient Production ... on the Moon"</i>		absent	absent

All seven sources assert route-scale feasibility / scalability; neither decisive coordinate is reported by any — the framing outruns the reported coordinates
